Portfolio: www.moiez.dev | Valid Transferable Iqama | Location: Riyadh, Saudi Arabia

Professional Summary

Product-focused Full Stack Engineer with 7 years of experience building scalable systems across Retail and SaaS, from POS platforms to loyalty systems and customer engagement tools, Ecommerce, Payment Integrations, Booking Systems, Search Engines Integrations and Dashboards. I take ownership of features end-to-end — from understanding business needs and structuring solutions to implementation and deployment — with a focus on writing maintainable code, improving system efficiency, and delivering software that creates measurable impact. My core strengths span developing POS retail systems, payment integrations (MyFatoorah, Moyasar), and CRM systems, alongside designing system architectures and helping teams execute on them, wallet integrations (Apple Wallet & Google Wallet), microservices and monorepo patterns, and leading UI/UX engineering solutions — with a track record of revamping and stabilizing unstable applications, supporting management teams, and improving products by solving real problems.

Professional Experience

Sr. Software Engineer

TWLM Solutions – Saudi Arabia

Feb 2025 – Present

- Led the development of a POS platform with integrated loyalty, promotions, and wallet systems, owning the technical direction from architecture through delivery.
- Architected and led development of a block-based page builder, empowering businesses to independently create and manage menus and e-commerce storefronts.
- Drove UX improvements across core user flows, cutting customer support requests by ~70% through data-informed design decisions.
- Directed the design and rollout of loyalty systems — points, loyalty cards, and gift cards — with Apple Wallet & Google Wallet integration and real-time notifications.
- Owned product experience improvements platform-wide, simplifying core workflows to reduce user friction.
- Spearheaded a geo-targeted promotional messaging system with branch-level campaign tracking, from concept through deployment.
- Played a key technical role in delivering a Flutter-based mobile app supporting storefront management and online ordering.
- Led backend performance optimization efforts, achieving a ~64% reduction in API response times and materially improving system performance.
- Directed a codebase-wide refactoring initiative to improve long-term maintainability, readability, and stability.
- Established data access architecture using Prisma ORM with PostgreSQL, streamlining schema migrations and query performance platform-wide.
- Owned the design and implementation of RBAC and OAuth2/JWT-based authentication with SSO, securing multi-role access across the platform.
- Led development of webhook-driven, event-based workflows powering real-time notification and wallet-update events.
- Built Redis-backed BullMQ background workers to process notification and wallet-update jobs asynchronously, improving reliability and throughput of real-time events.
- Directed CRM integration efforts to synchronize customer and business data across the platform.
- Spearheaded the integration of OpenRouter AI (DeepSeek), introducing smart menu search and AI-based analysis of restaurant data.

Sr. Software Engineer

ACCIONA – Saudi Arabia

Jan 2024 – Feb 2025

- Improved internal operations by digitizing workflows and reducing system downtime by ~25%.
- Built internal dashboards for reporting and analytics using React and SQL.
- Maintained and extended backend services and APIs for internal tools.
- Implemented RBAC and OAuth2/JWT-based authentication for internal dashboards and tools.
- Identified and resolved system bottlenecks, improving performance and ensuring smoother day-to-day operations.
- Automated routine processes and reporting tasks, increasing efficiency and reducing manual workload.

Senior Frontend Engineer

Santa Casa da Misericórdia de Borba– Portugal (Remote)

Oct 2022 – Jan 2024

- Delivered 8+ projects across SaaS, e-commerce, and education platforms.
- Built scalable, high-performance UIs using React, Vue, Nuxt, and Tailwind.
- Developed and integrated REST APIs using Node.js and Express.
- Improved application performance using code-splitting, lazy loading, and optimized rendering.
- Deployed applications using CI/CD pipelines (GitLab) and platforms like Vercel.
- Implemented OAuth2/JWT-based authentication and SSO integration for client platforms.
- Translated Figma/XD designs into production-ready, responsive interfaces.
- Collaborated directly with clients to understand requirements and translate business needs into scalable technical solutions.
- Debugged complex production issues and provided optimized solutions, improving system reliability and user experience.
- Built reusable components and modular architectures, reducing development time and improving maintainability across projects.

Frontend Developer → Senior Frontend Developer

Creative Inter Tech – Faisalabad, Pakistan

Mar 2020 – Oct 2022

- Led frontend for B2B travel platforms (AA Tourism, City Arrivals) serving 10K+ monthly users.
- Built reusable component libraries in React/Vue, cutting dev time by ~30%.
- Collaborated in Agile teams, improving UX and boosting user retention by 15%.
- Upgraded legacy projects with React/Vue, improving responsiveness by 25%.
- Applied Redux, Vuex, and hooks for scalable state management, reducing data-related bugs by 40%.
- Implemented role-based access control (RBAC) for platform user permissions and admin workflows.
- Enhanced performance with React.memo and render optimizations.

Web Developer

Content Arcade – Faisalabad, Pakistan

May 2019 – Mar 2020

- Built responsive layouts using HTML, CSS, Bootstrap.
- Supported backend with PHP, Laravel, and MySQL APIs (CRUD).
- Performed bug fixes and cross-browser testing, improving stability.

Core Skills

-
- **Architectures:** MVC, HMVC, MVP, MVVM, Component Based, and Microservices
 - **Languages:** TypeScript, JavaScript (ES6+)
 - **Frontend:** React.js, Next.js, Zustand React, Redux, TanStack Query, Context API, Vue.js, Nuxt.js, Pinia, Vuex
 - **Backend:** Node.js, NestJS, Express.js (REST APIs, CRUD), Fastify, Laravel, .NET, ASP.NET, Entity Framework, LINQ
 - **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server, Prisma (ORM), Redis (caching, session management, BullMQ queues)

- **Performance & Security:** Code-splitting, lazy loading, caching, database indexing, RBAC, OAuth2, OIDC, JWT, SSO, authentication & authorization
- **Integrations:** Webhooks, Event-driven architecture, CRM systems, Payment gateways (MyFatoorah, Moyasar), Wallet integrations (Apple & Google)
- **AI & Automation:** OpenRouter AI (DeepSeek) integration, Agentic AI workflows with Cursor & Claude
- **Collaboration & Tools:** GitHub, GitLab, Docker, Jira, Trello, Agile/Scrum, GitHub Copilot

Some of My Key Projects

Twlm Solutions

POS and CMS platform providing services to business to manage their pos systems, gulf tax integrations, inventory management, loyalty programs, gift cards, E-Menu (Customizable ecommerce pages) and 30+ CMS features. This is B2B2C Project.

AA Travel & Tourism

The platform which designed to flight booking and tour plans. The system is integrated with flight booking engines like IATA Codes, Sabre and Amadeus.

Gala Travels (galatravels.com)

The platform which designed to flight, hotel, vacation, and cruise booking plans for a travel agency. The system backend was built using Laravel.

SCM Borba

A web platform developed for managing digital presence and services, including content management and user interaction features. Built as a full-stack application using Node.js, Express.js, and Vue.js/Nuxt.js, focusing on performance, usability, and maintainability.

Company Support Chatbot (AI Project)

An AI-powered chatbot built using OpenRouter AI (DeepSeek) to help clients learn about a company's profile, services, and support information in real time. Also integrated into my personal portfolio (www.moiez.dev) to demonstrate AI-driven, agentic workflows.

City Arrivals (cityarrivals.ca)

A luxury car booking platform based in Canada, built for B2B travel client operations alongside AA Travel & Tourism, offering a seamless booking experience for premium vehicle rentals.

EIMS (Current Project) — AI-Powered Learning Management System

Currently developing an AI-powered learning management system, built with a .NET backend, that helps students select the right courses based on their interests and goals, using AI-driven recommendations to personalize the learning path.

Education

BSCS Hons – Bachelor of Science in Computer Science

National College Of Business Administration & Economics Lahore | 2017–2021
